

## **Statistical Release**

# **Gross Domestic Product Second Quarter 2009**

---

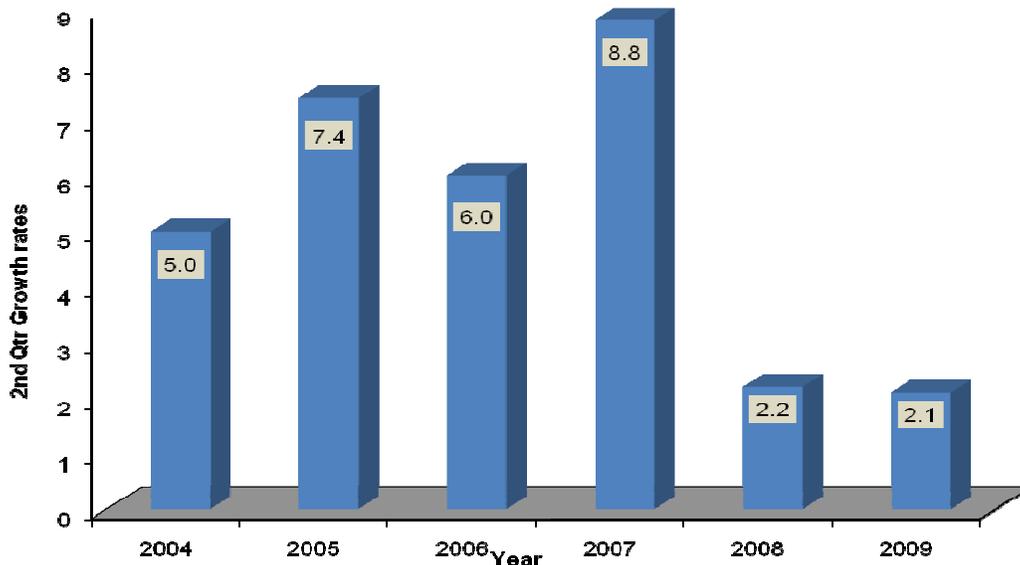

## **Economic Performance**

After attaining an impressive revised growth of 4.0 per cent in the first quarter of 2009, the economy has grown by a provisional estimate of 2.1 per cent in the second quarter of 2009 remaining at almost the same level as of a similar quarter of 2008. Sectoral performances varied considerably with the hotels and restaurants achieving the highest growth of 24.2 per cent reflecting a recovery in tourism while the drought caused electricity and water to record the largest contraction of 5.0 per cent. On one hand, hotels and restaurants, construction, transport and communication, taxes on products and financial intermediation were the key drivers of the growth during this quarter. On the other hand, agriculture and forestry, manufacturing, electricity and water, and fishing slowed the growth.

Persistent drought and the current global economic downturn are seen as the main causes restraining the economy from attaining its growth potential. The current drought has had direct ramifications on agriculture and forestry, and electricity and water while its indirect impacts have also weighed substantially on manufacturing and financial intermediation. Notably, agriculture and forestry has been contracting since the third quarter of 2007 while mining and quarrying, and electricity and water have respectively contracted for the last three and two successive quarters.

During the quarter under review, the international oil prices were considerably lower than that of the same period in 2008 which partly contributed to fall in inflation despite shortage of food commodities within this period. Activities of Nairobi Stock Exchange remained subdued principally due to suppressed domestic economic activities and a decrease in international funds seeking equity participation.

**Figure 1: Overall Growth rates of the Second Quarter**

## **Sectoral Analysis**

### **Agriculture and forestry**

Agricultural sector continued to decline for the second consecutive year in the second quarter having recorded declines of 1.9 per cent and 2.7 per cent in 2008 and 2009, respectively. The unfavourable weather conditions witnessed in the first half of the year continued to adversely affect the sector with production of major crops recording declines except for coffee.

Tea production declined by 15.2 per cent in the second quarter of 2009 to stand at 73,483 metric tonnes compared to 86,634 metric tonnes in 2008. On the other hand, coffee deliveries increased to 17,189 metric tonnes in 2009 compared to 9,553 metric tonnes in 2008 representing a growth of 79.9 per cent.

Exports of horticultural produce recorded mixed performances in the quarter with cut flowers and vegetables declining while that of fruits increased. Exports of cut flowers declined by 8.3 per cent to 21,101 metric tonnes in the second quarter of 2009 compared to 23,007 metric tonnes in the same period of 2008. Exports of vegetables declined by 23.7 per cent to stand at 16,553 metric tonnes in 2009 from 21,706 metric tonnes in 2008. The declines in cut flowers and vegetables have been largely due to the outcome of the global economic recession. However exportation of fruits increased by 21.9 per cent to 6,973 metric tonnes in 2009

compared to 5,720 metric tonnes in 2008. Milk intake decreased from 98.4 million litres in the second quarter of 2008 to 84.1 million litres in 2009 over the same period.

### **Manufacturing**

The manufacturing sector is estimated to have declined by 0.7 per cent in the second quarter of 2009 compared to a growth 4.6 per cent in 2008 over the same period. Manufacture of food and beverages sub sector recorded a decline of 1.8 per cent in this quarter of 2009 due to decline in production of key commodities like beer, wheat flour and maize meal. All other manufacturing whose key indicators include cement production, manufacture of textiles clothing and footwear among others declined by 0.3 per cent in the period under review.

### **Electricity and water**

The sector is estimated to have declined by 5.0 per cent in the second quarter of 2009 compared to a growth of 5.1 per cent over the same period in 2008. This decline is attributed to the reduction in generation of hydro electricity due to the unfavourable weather conditions. The generation of hydro electricity declined by 26.7 per cent while that of thermal increasing by 11.1 per cent in the period under review. The total consumption of electricity in this quarter declined marginally from 1,347 GWH in 2008 to 1,315 GWH in 2009.

### **Hotels and Restaurants**

The sector continued to record impressive growth in the first half of the year showing a recovery from the post election skirmishes. The second quarter of 2009 is estimated to have grown by 24.2 per cent compared to a decline of 37.0 per cent in 2008. The aggressive marketing of the country as a preferred tourism destination continued to bear fruits as the number of international arrivals increased during the period under review.

### **Transport and Communications**

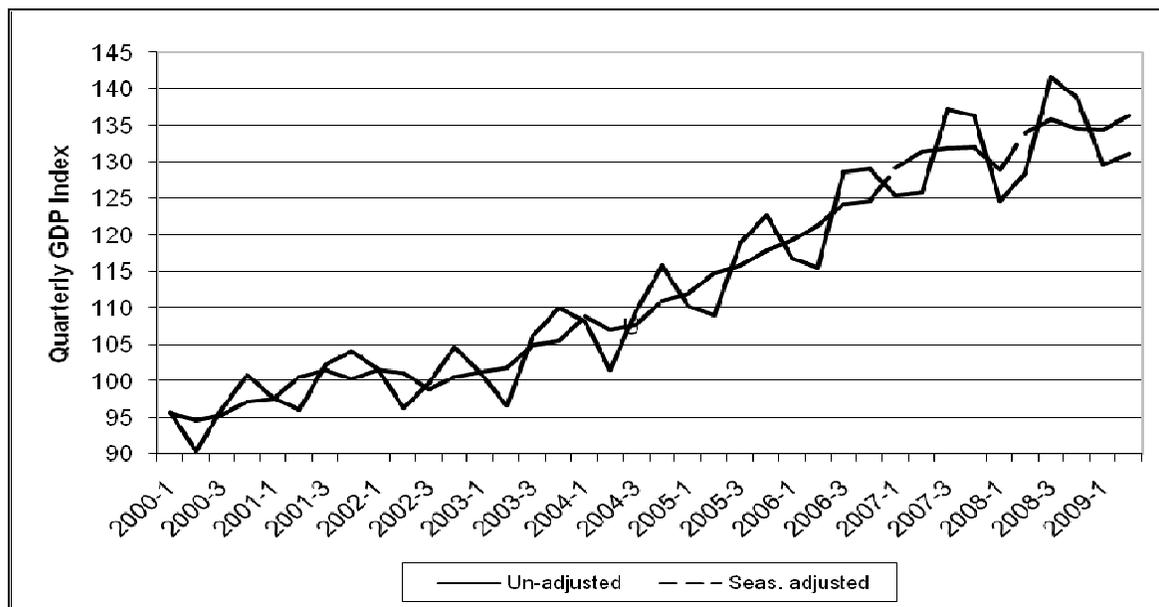

Transport and communication sector recorded a growth of 5.7 per cent in the second quarter of 2009 compared to growth of 0.6 per cent in 2008. The key indicators to the transport and storage sub sector which are the consumption of light fuel and motor spirit recorded growths of 4.4 per cent and 19.9 per cent, respectively. The number of tourist arrivals and departures which also monitors the performance of the air transport grew by 12.4 per cent and 10.2 per cent respectively. The communication sub sector recorded a growth of 2.6 per cent in the second quarter of 2009 compared to a growth of 2.4 per cent in 2008.

### Seasonally adjusted GDP

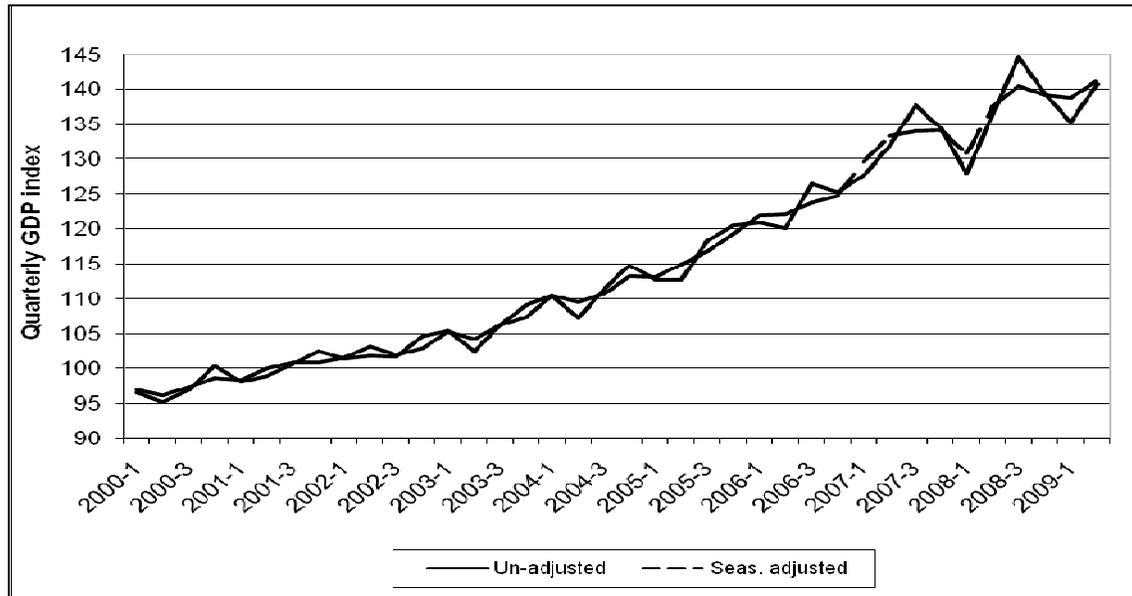

The seasonally adjusted GDP increased by 1.5 per cent in the second quarter of 2009 compared to first quarter of 2009 as shown in Table 2. This indicates a growth of the economy in the second quarter of 2009 compared to a decline of 0.2 per cent in the first quarter of 2009. It should still be noted that the seasonally adjusted series is somewhat volatile.

Agriculture has a very strong impact on the seasonal pattern of GDP. This is clear when comparing the seasonally adjusted and unadjusted GDP (Figure 2) with the seasonally adjusted and non-adjusted “non-agricultural GDP” (Figure 3).

**Figure 2: Movement of seasonally adjusted and unadjusted QGDP**

**Figure 3: Movement of seasonally adjusted and unadjusted QGDP excluding agriculture**

**Table 1 Gross domestic product by activity**
